ABOUT

I am the first in my entire family to attend college and damn proud of it. Passionate about building clean, good looking, efficient, and responsive web applications. I am extremely curious, love learning new things, and always challenging myself. The type of person who obsesses about getting those CSS details just right. The kind of guy who built a clone of a SaaS web application just to save a few bucks on a membership subscription.

WORK EXPERIENCE

Full-Stack Web Developer

New York State Government

03/2017 - PRESENT

- Worked with Google in modernizing New York State's aging unemployment application system to support the rapid volume of applications from those affected by COVID-19. Moved from mainframes and rebuilt the frontend in Angular 9.
- Worked as frontend lead on a COVID-19 screening web application used by all New York State employees to help provide a safe workplace. Angular 8 frontend.
- Worked with a small team to developed Nourish NY, a web portal allowing farmers to donate surplus products that would otherwise expire to food banks and homeless shelters. Angular 9 frontend, ASP.NET MVC Core backend
- Developed and maintain an internal and external Freedom of Information Law system for requesting government records.
- Oversaw small groups of interns and led the development of multiple internal ECM tools.
